

**Summer Influenza Summary:**

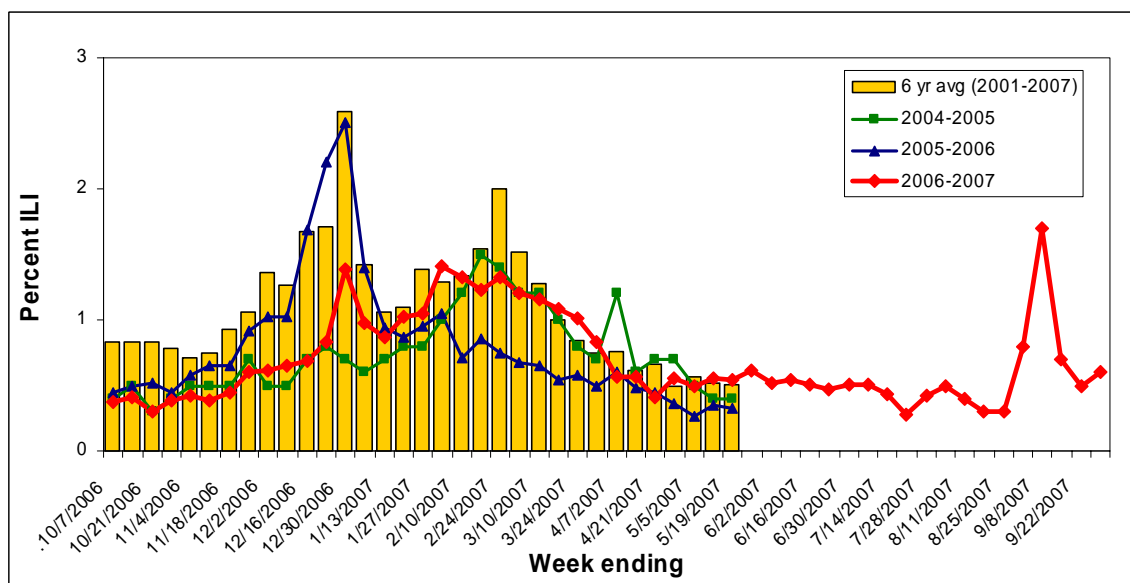

No cases of confirmed influenza were reported for Arizona during the month of September (Weeks 36-39).

Data in this report are provisional and may change as more reports are received.

**Influenza-Like Illness (ILI) Surveillance from Sentinel Providers**

The proportion of patient visits to sentinel providers for ILI in the state peaked at 1.7% during the month of September (Weeks 36-39). This increase was seen in both northern and southern regions of the state but no cases of influenza were reported during this time. Arizona's overall ILI baseline is ~0.5%.

ILI is defined as a fever of at least 100°F plus either a cough or a sore throat.

**RSV Activity in Arizona:**

No cases of RSV were reported for Arizona during the month of September (Weeks 36-39).
